

LAE SINGLE DRIVE

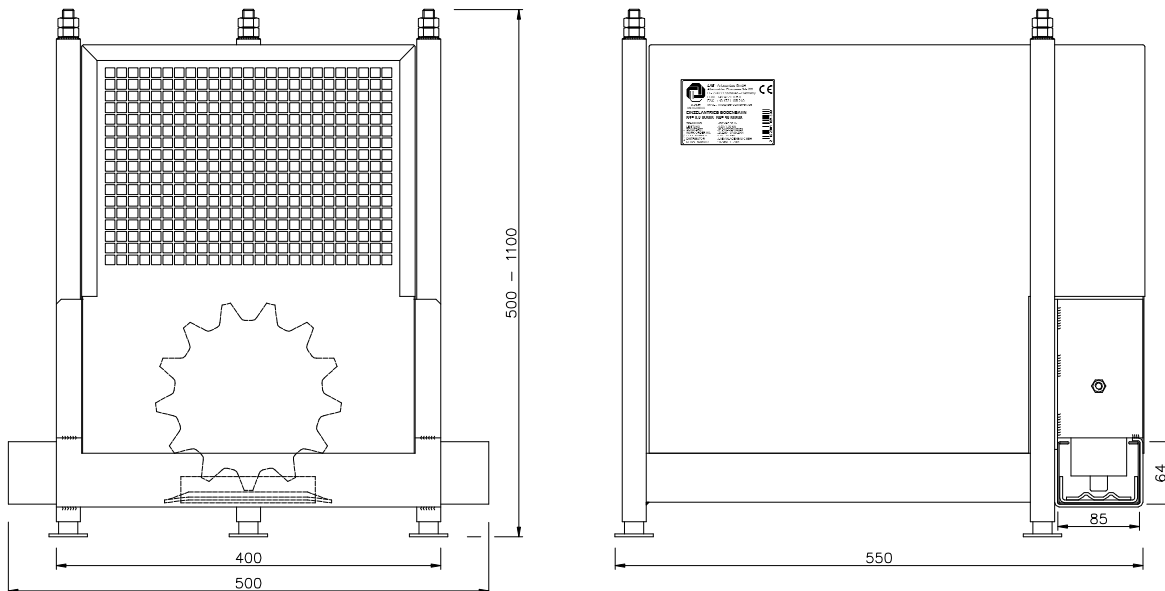

- **Technical Information**

The LAE single drive is designed for the drive of chain feeders. Thanks to different gearbox and engine combinations almost all desired chain speeds are available. The transmission is carried out by a robust V-belt drive. This design prevents gearbox or engine damage by clamping chains. In addition, a shear pin protects the feed chain and the drive system against overload. The steel cast-iron drive wheel is easily removable from its carrier and can be used for both directions of travel.

The compact unit stands on stainless steel feet is steplessly height-adjustable.

LAE Art.Nr.	:	162595
Length x WIDTH X HEIGHT	:	0,55 x 0,50 x 0,50 / 1,10 M
Weight	:	Ca. 55 Kg
Noise	:	Less than 70 dB(A)
Engine power	:	0,55 / 1,5 kW
Speed	:	6,0 / 18,0 M/min
Motor voltage	:	400 / 400 VAC
Motor frequency	:	50 Hz
Engine speed	:	880 / 2750 1/min-

Further motor powers, speeds and voltages on request.
